

GstCUDA: A GStreamer-CUDA interface solution

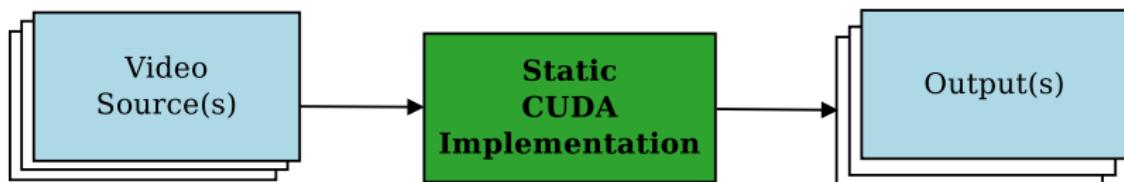

José Jiménez-Chavarría

RidgeRun Enginnering
GStreamer Conference 2018

October 25, 2018

Traditional Solutions

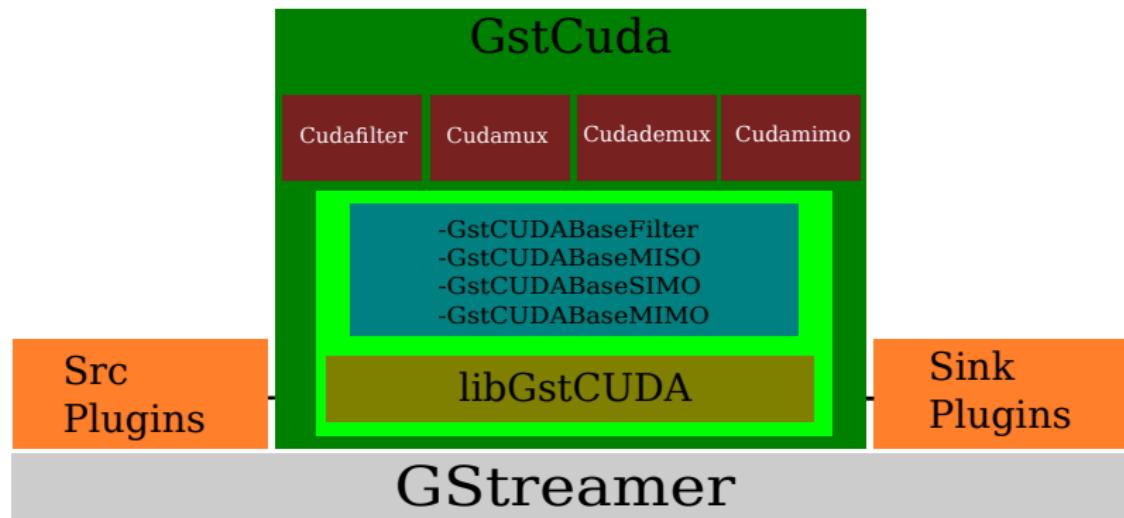

Disadvantages

- Doesn't scale properly when adding/removing inputs/outputs
- No complexity abstraction
- Doesn't reach peak performance

GstCUDA

GstCuda offers a framework to develop custom GStreamer/CUDA elements:

Features

Key features

- Framework supports GStreamer elements that can execute any CUDA algorithm
- Zero memory copy (NVMM direct mapping & Unified memory allocator) on Jetson
- High performance from the get go using prototyping elements: **cudafilter**, **cudamux**, **cudademux**, **cudamimo**.

Example 1

Gray-scale filter using **cudafilter** on TX1 (NVMM) memory

4K 60fps capture to display (in-place=true)

Example pipeline

```

gst-launch-1.0 nvcamerasrc queue-size=10 sensor-id=0 fpsRange='60 60' ! "video/x-
raw(memory:NVMM),width=3840,height=2160,format=I420,framerate=60/1" ! nvvidconv ! "video/x-
raw(memory:NVMM),width=3840,height=2160,format=I420,framerate=60/1" ! cudafilter in-place=true location=../gray-scale-filter.so ! perf
print-arm-load=true ! nvoverlaysink --gst-debug=0
  
```

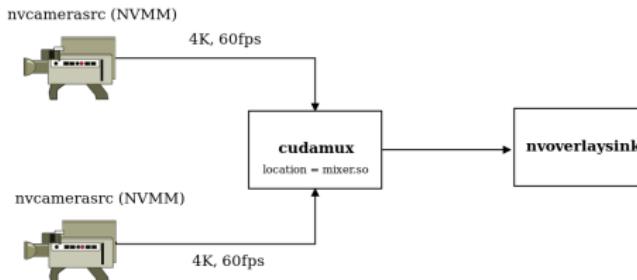

Performance stats

```

GST-PERF INFO --> Timestamp: 0:03:56.819087040; Bps: 776; fps: 60.0; CPU: 16;
GST-PERF INFO --> Timestamp: 0:03:57.825121037; Bps: 771; fps: 59.64; CPU: 13;
GST-PERF INFO --> Timestamp: 0:03:58.837141233; Bps: 766; fps: 59.28; CPU: 14;
GST-PERF INFO --> Timestamp: 0:03:59.849401695; Bps: 766; fps: 59.28; CPU: 14;
GST-PERF INFO --> Timestamp: 0:04:00.859525079; Bps: 768; fps: 59.40; CPU: 13;
GST-PERF INFO --> Timestamp: 0:04:01.871618207; Bps: 766; fps: 59.28; CPU: 15;
GST-PERF INFO --> Timestamp: 0:04:02.883459413; Bps: 767; fps: 59.34; CPU: 15;
GST-PERF INFO --> Timestamp: 0:04:03.894646509; Bps: 767; fps: 59.34; CPU: 14;
GST-PERF INFO --> Timestamp: 0:04:04.906216370; Bps: 767; fps: 59.34; CPU: 14;
GST-PERF INFO --> Timestamp: 0:04:05.917121183; Bps: 768; fps: 59.40; CPU: 14;
  
```

Example 2

Video mixing using **cudamux** on TX1 (NVMM) memory

2x 4K 60fps camera streams camera streams mixed to display (in-place=true)

Example pipeline

```

gst-launch-1.0 cudamux name=cuda in-place=true location=~/mixer.so nvcamerasrc queue-size=10 sensor-id=0 fpsRange='60 60' ! "video/x-raw(memory:NVMM),width=3840,height=2160,format=I420,framerate=60/1" ! tee name=t.srcc_0 ! nvvidconv ! "video/x-raw(memory:NVMM),width=3840,height=2160,format=I420,framerate=60/1" ! queue ! cuda.sink_0 t.srcc_1 ! nvvidconv flip-method=2 ! "video/x-raw(memory:NVMM),width=3840,height=2160,format=I420,framerate=60/1" ! queue ! cuda.sink_1 cuda. ! perf print-arm-load=true ! nvoverlaysink --gst-debug=0
  
```

Performance stats

```
